

## LIGHT IS LIGHT

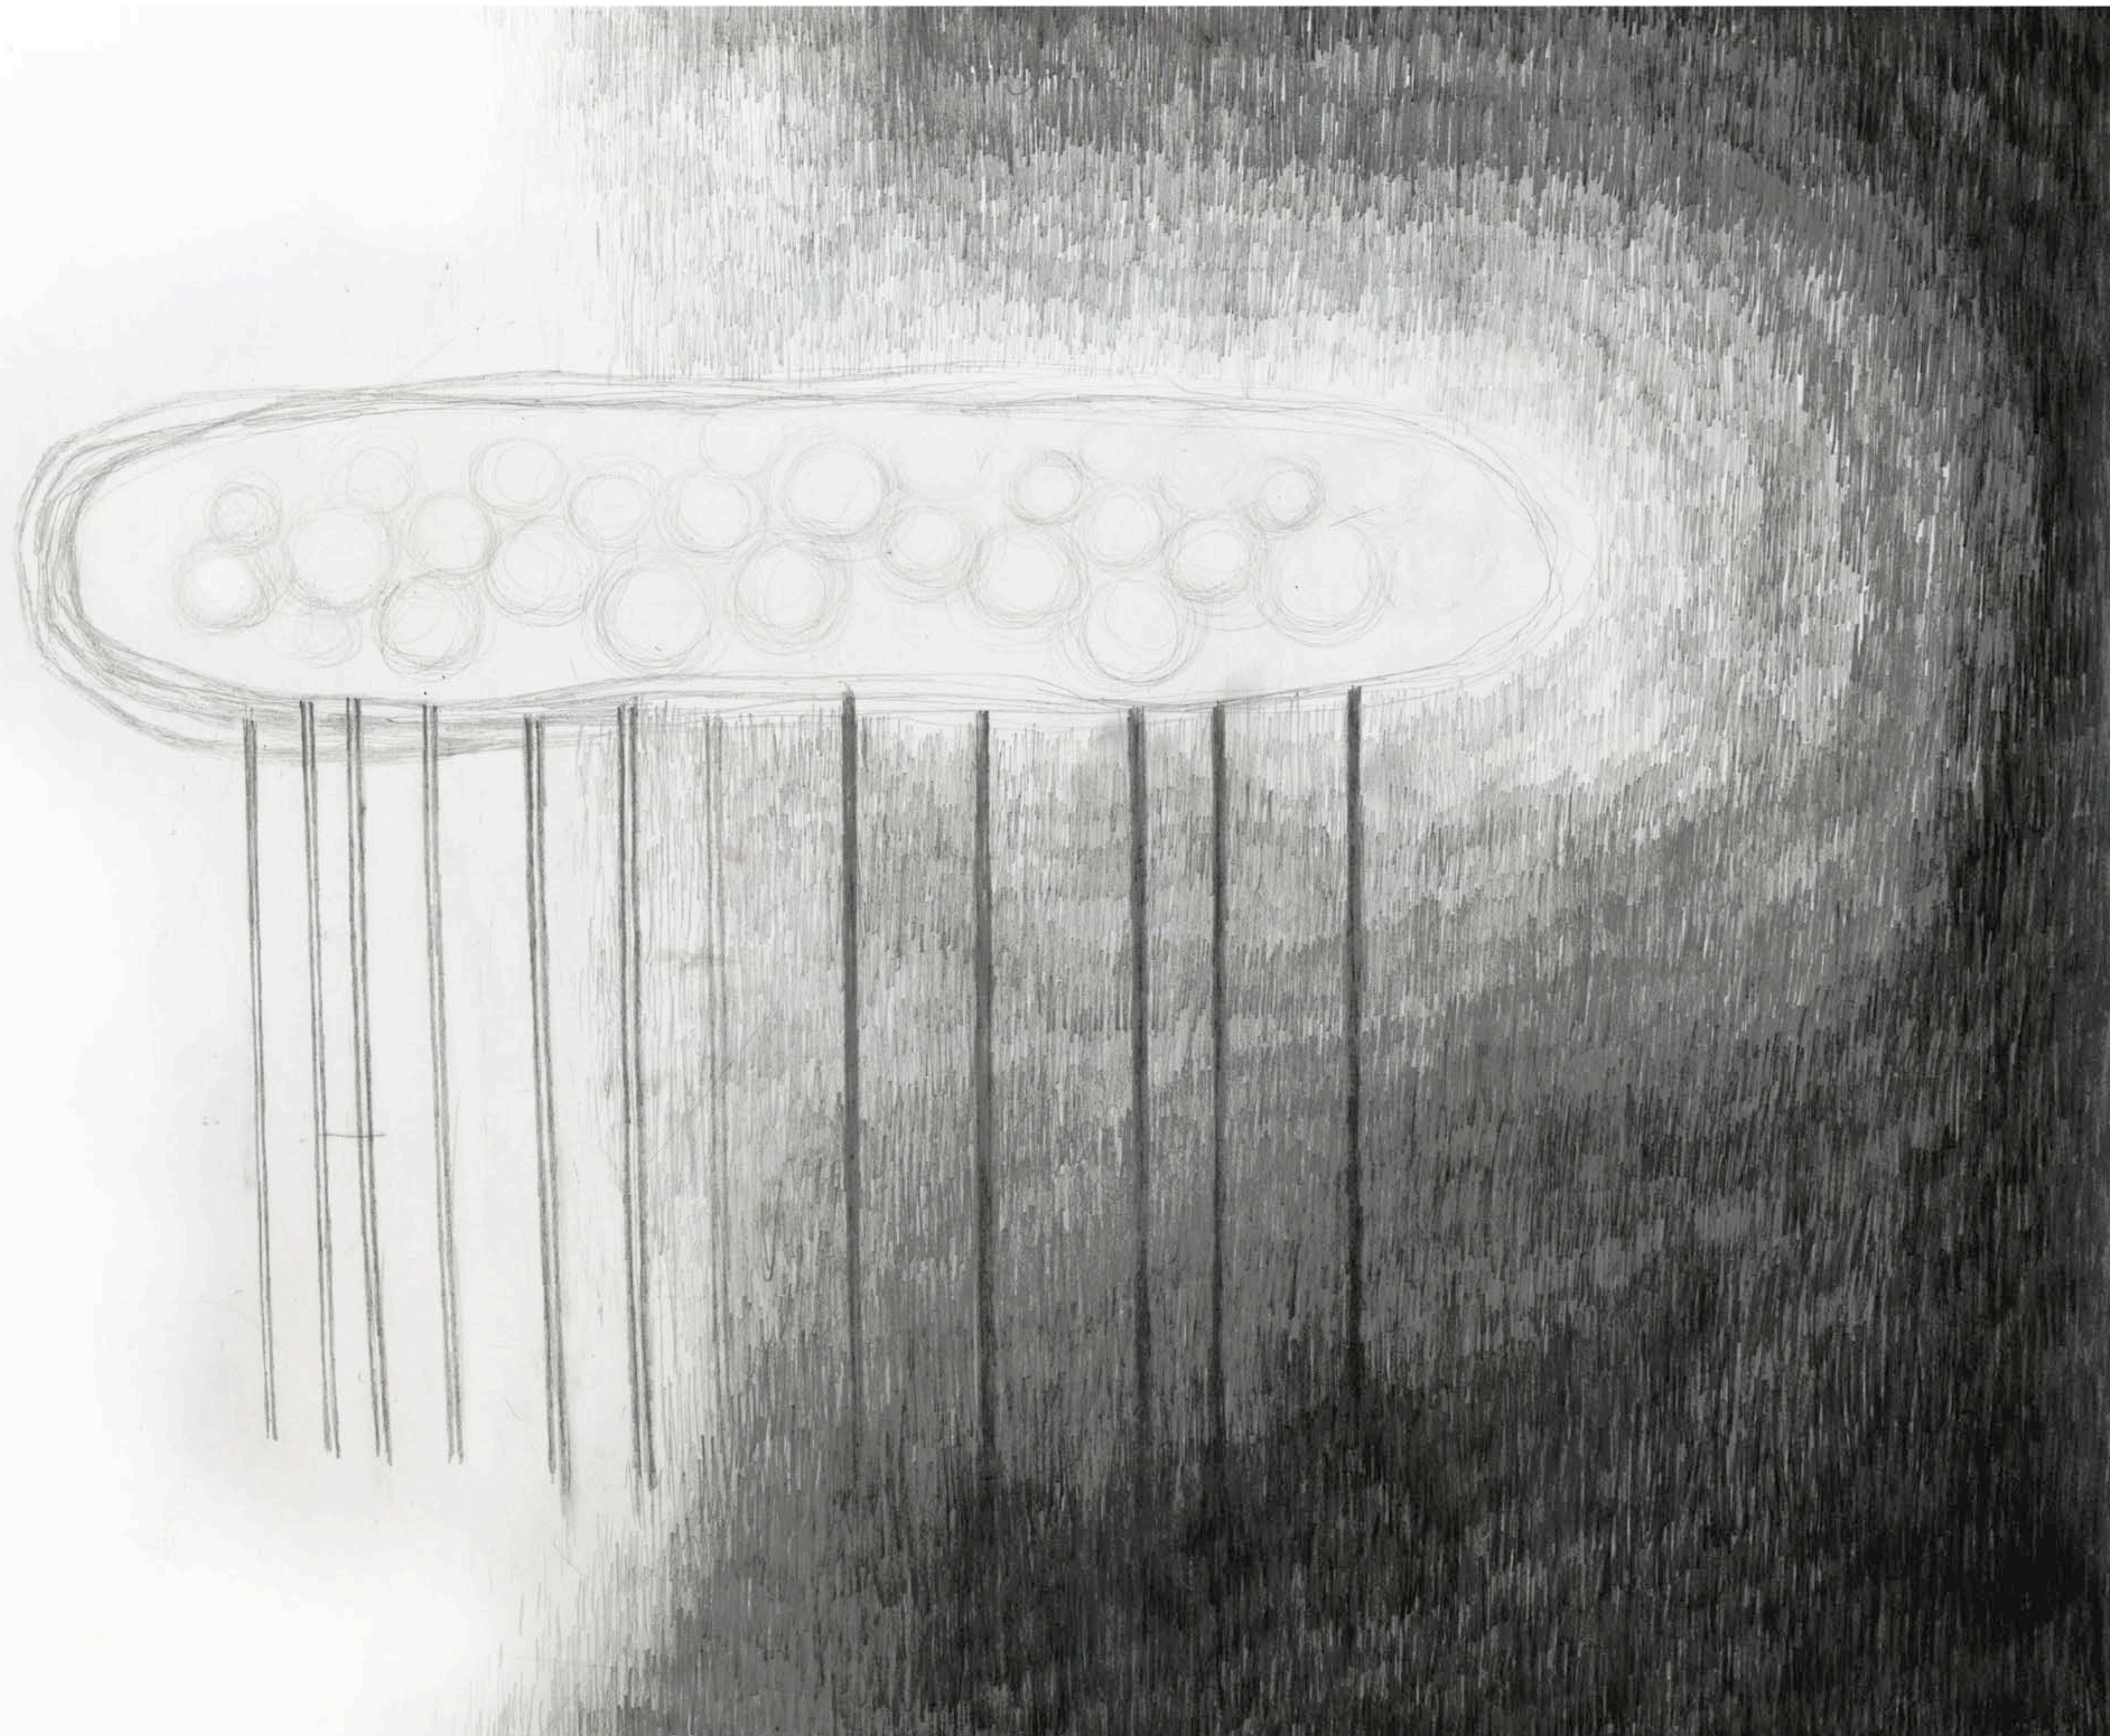

fragile or bright.  
Day is turning into  
night.

Planet rolls down  
restlessly  
through the starry sky,  
It balances and tilts to  
sides,  
let meteors pass by.  
Never stopping,  
never ceasing  
spinning, spinning still -  
so that  
sleep would follow  
after work  
and again, again, until...

You cannot fight this  
rhythm,  
light 's faster than  
sound,  
if you try to keep up  
it sews your shadow to  
the ground.

But if moon is new,  
and your are one of  
the insomniac kind,  
don 't give up and  
rather turn on  
your illuminated mind.

Follow the path  
of the planet,  
in and out of  
sight,  
Swing, turn, revolve,  
find the balance,  
It 's volatile  
as light.

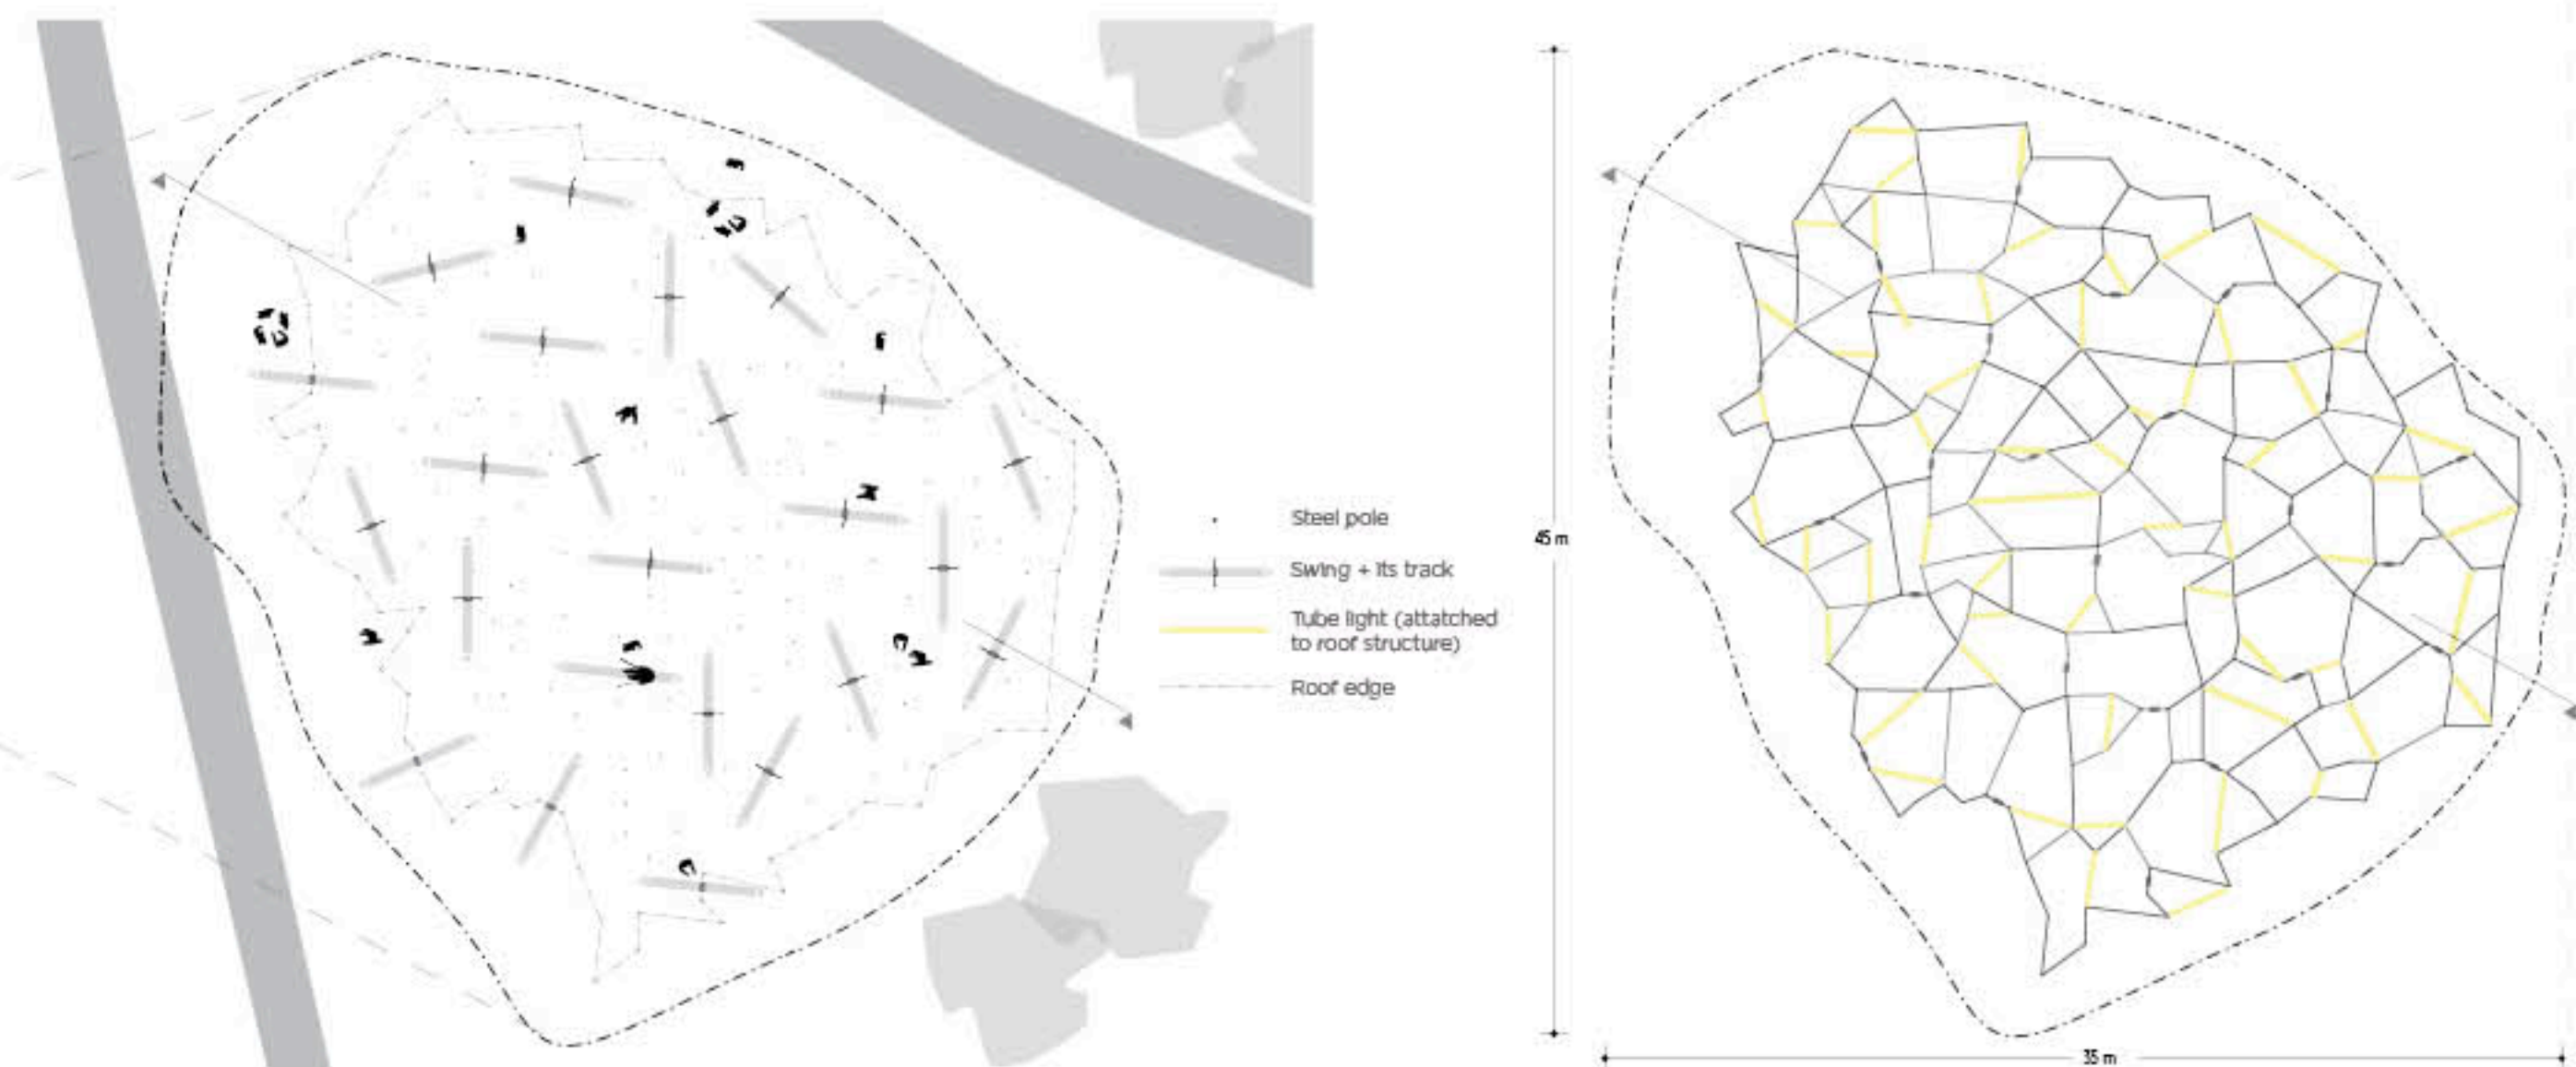

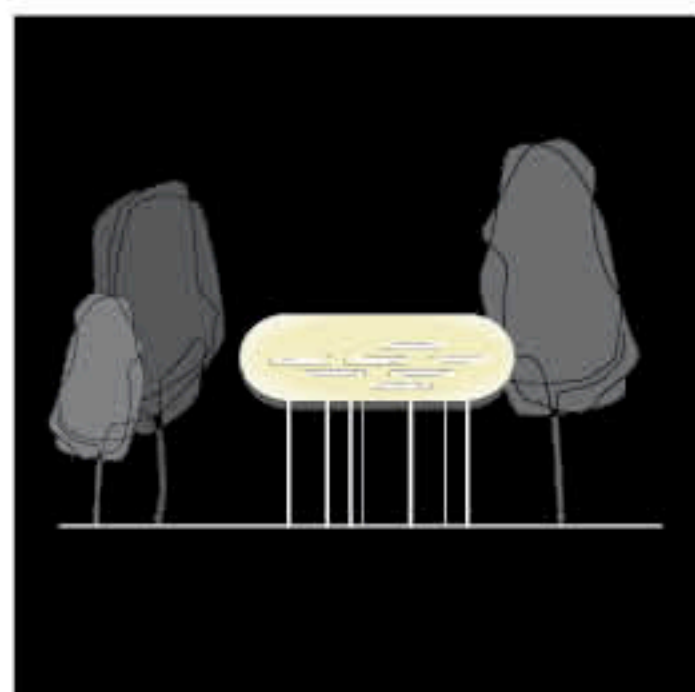

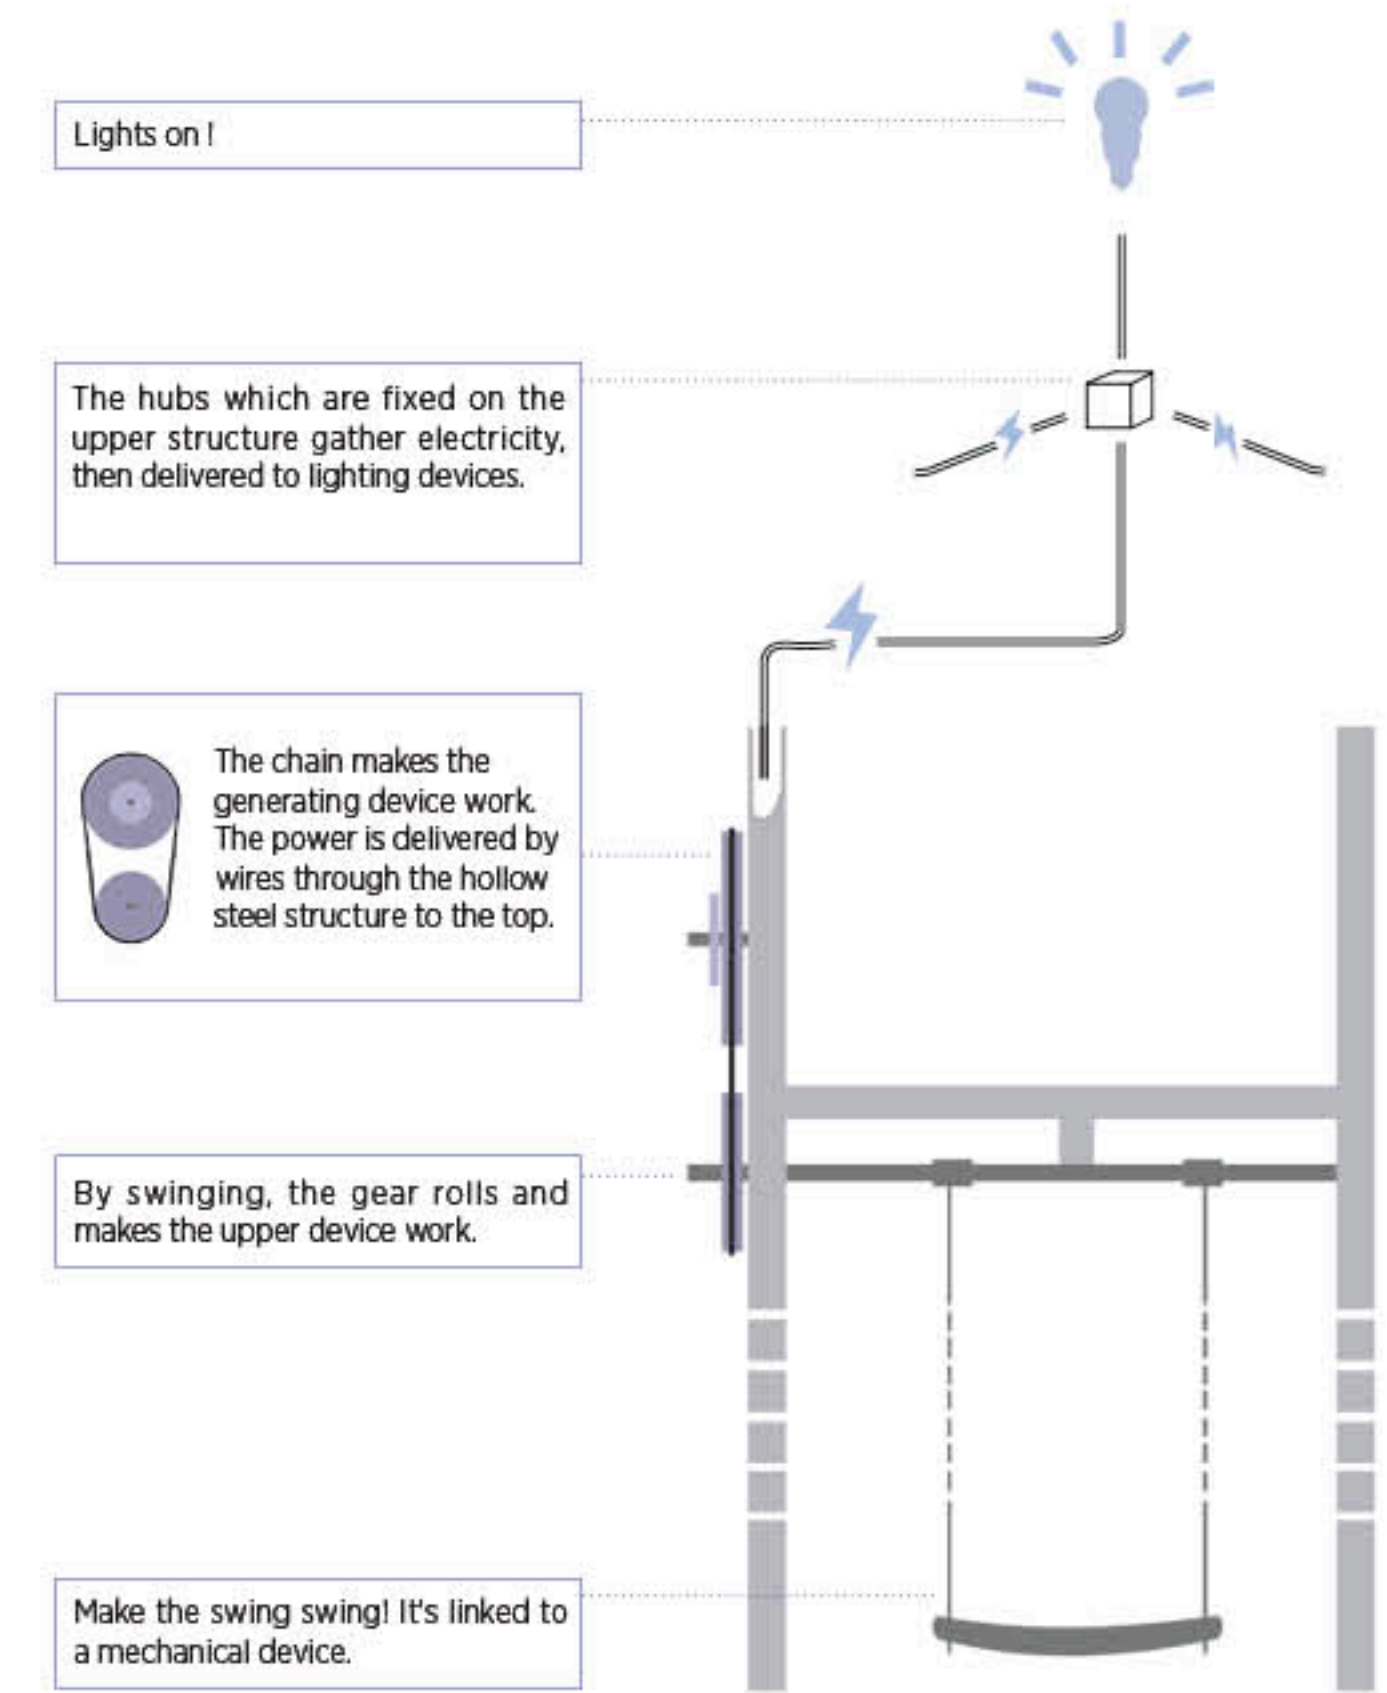

DAY IS FOLLOWED BY NIGHT, RAIN BY DRY PERIODS,  
WINTER REPLACES SUMMER.  
TOO MUCH OF A GOOD THING COULD BREAK THE NATURE'S RITES.

UNBALANCE REMINDS US HOW IMPORTANT BALANCE IS.  
BALANCE OF THE ENVIRONMENT, LIFE, ENERGY.  
EXCESS COULD BECOME HARMFUL.

IF YOU WANT TO HAVE AN EXCESS OF LIGHT AT NIGHT,  
YOU HAVE TO EARN IT BY DAY.  
YOU WILL ALWAYS CHERISH IT MORE, IF YOU WILL GENERATE IT YOURSELF.  
BY SWINGING IN BETWEEN THE BALANCE AND UNBALANCE,  
YOU CAN TURN ON BULB,  
BUT ONLY WITH HELP AND ENCOUNTERS OF OTHERS  
YOU CAN ENLIGHTEN A LIGHTHOUSE FOR THE ISLAND.
