

# REFLECTION(S)

every point returns to its original location.

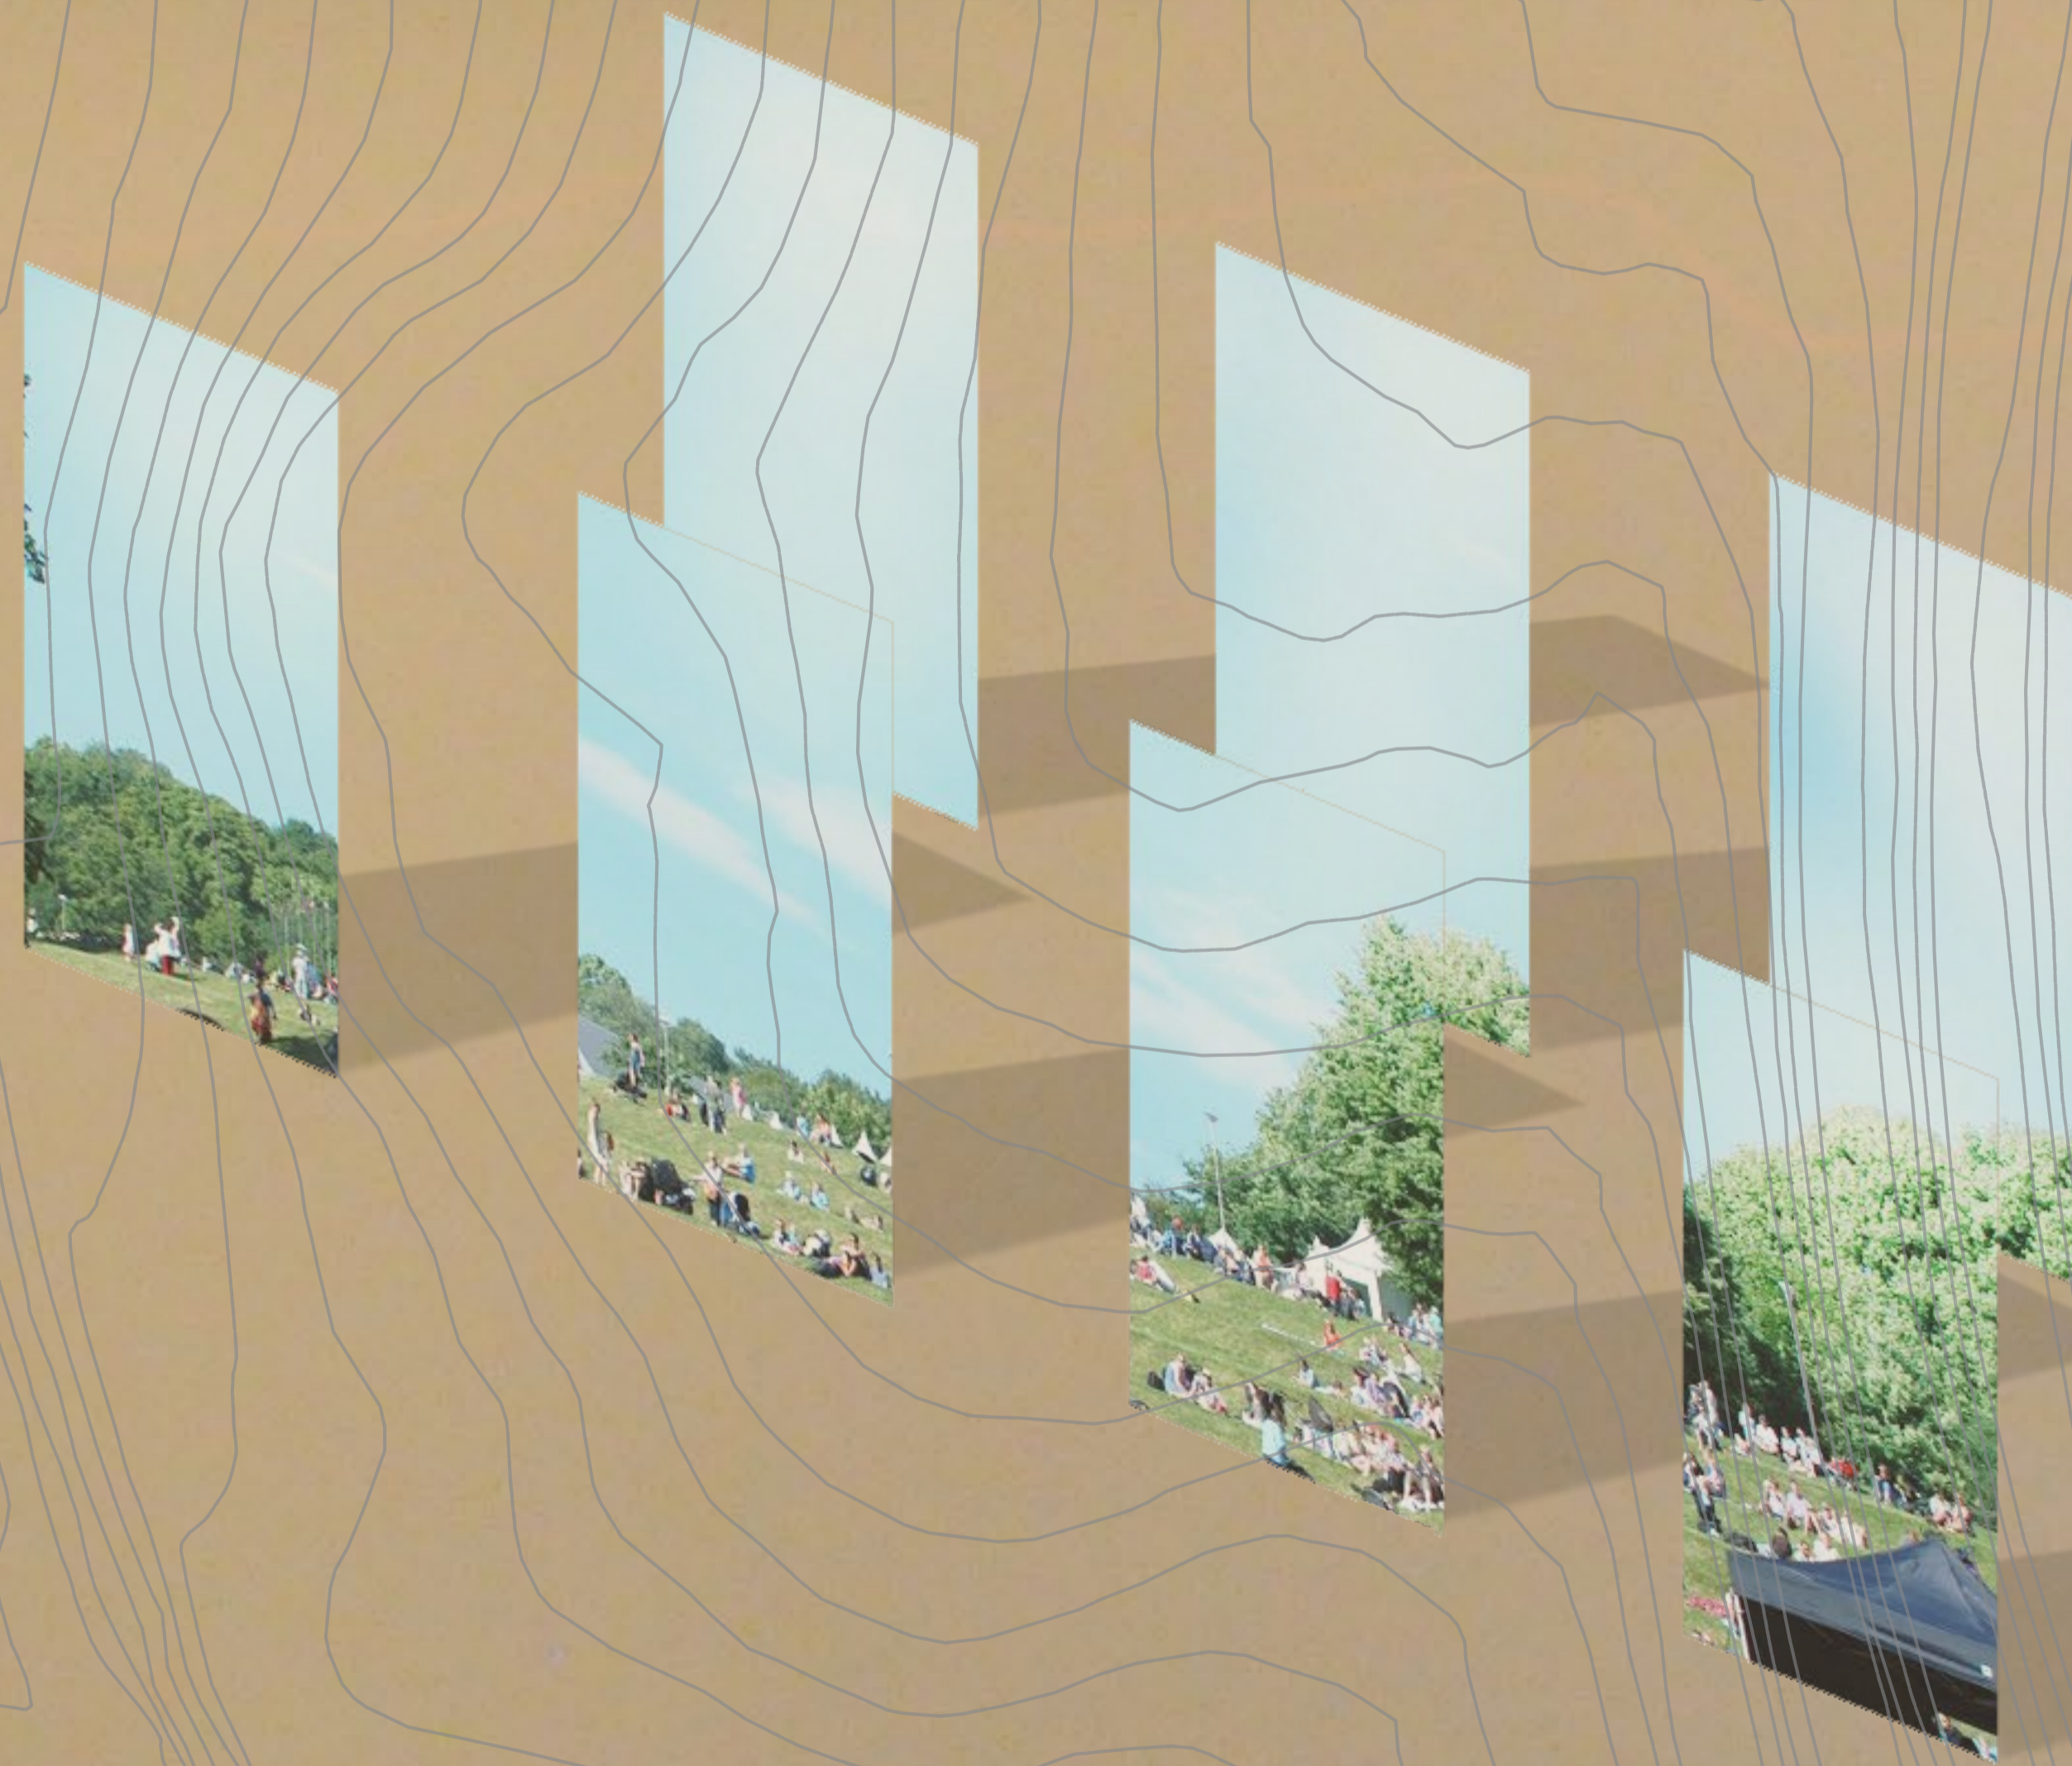

the image of a figure by a reflection is its mirror image.

a figure which does not change upon undergoing a reflection is said to have reflectional symmetry.

some reflect over segregated growing cities throughout a defined space,

others over the weather and a third over western consumption.

# MIRRORS

the mirrorwall turns your actions against-towards you and makes you reflect upon your very presence. you can see others while you meet yourself through reflection.
