

LIFE AFTER PEOPLE

An Historical research by scientists says that the world , from extinction of the human race , will have a place in Pyramiden more durable , a perfect place for the natural conservation of resources , for its climate , location , isolated from possible places of urban expansion .

A contemporary fossil that it will transmit our culture for possible future civilization .The privilege of it which enjoy, we like pushed to reconsider the concept of the classical conservation .

Always directly linked to the vision of history and time , th conservation , in the current debate focuses on WHAT preserve with an intrinsic view of this architectural object. No architectural work lasts forever , because we should think less as individuals and more species , to preserve our culture and make it immortal .

Imagine the Eiffel Tower , the Guggenheim museum, the Colosseum , you would be willing to give up forever to the fruition of an important piece of the world ? The sacrifice of the non- use of the work will ensure a greater good shared our immortality .

The intent of the project is to exaggerate the ' idea of preservation , freezing the current state of the buildings , making them " stable " through the use of a fossil material , such as amber.

Incorporating manufactured in a fossil material , the architecture is free from ' historical task" .

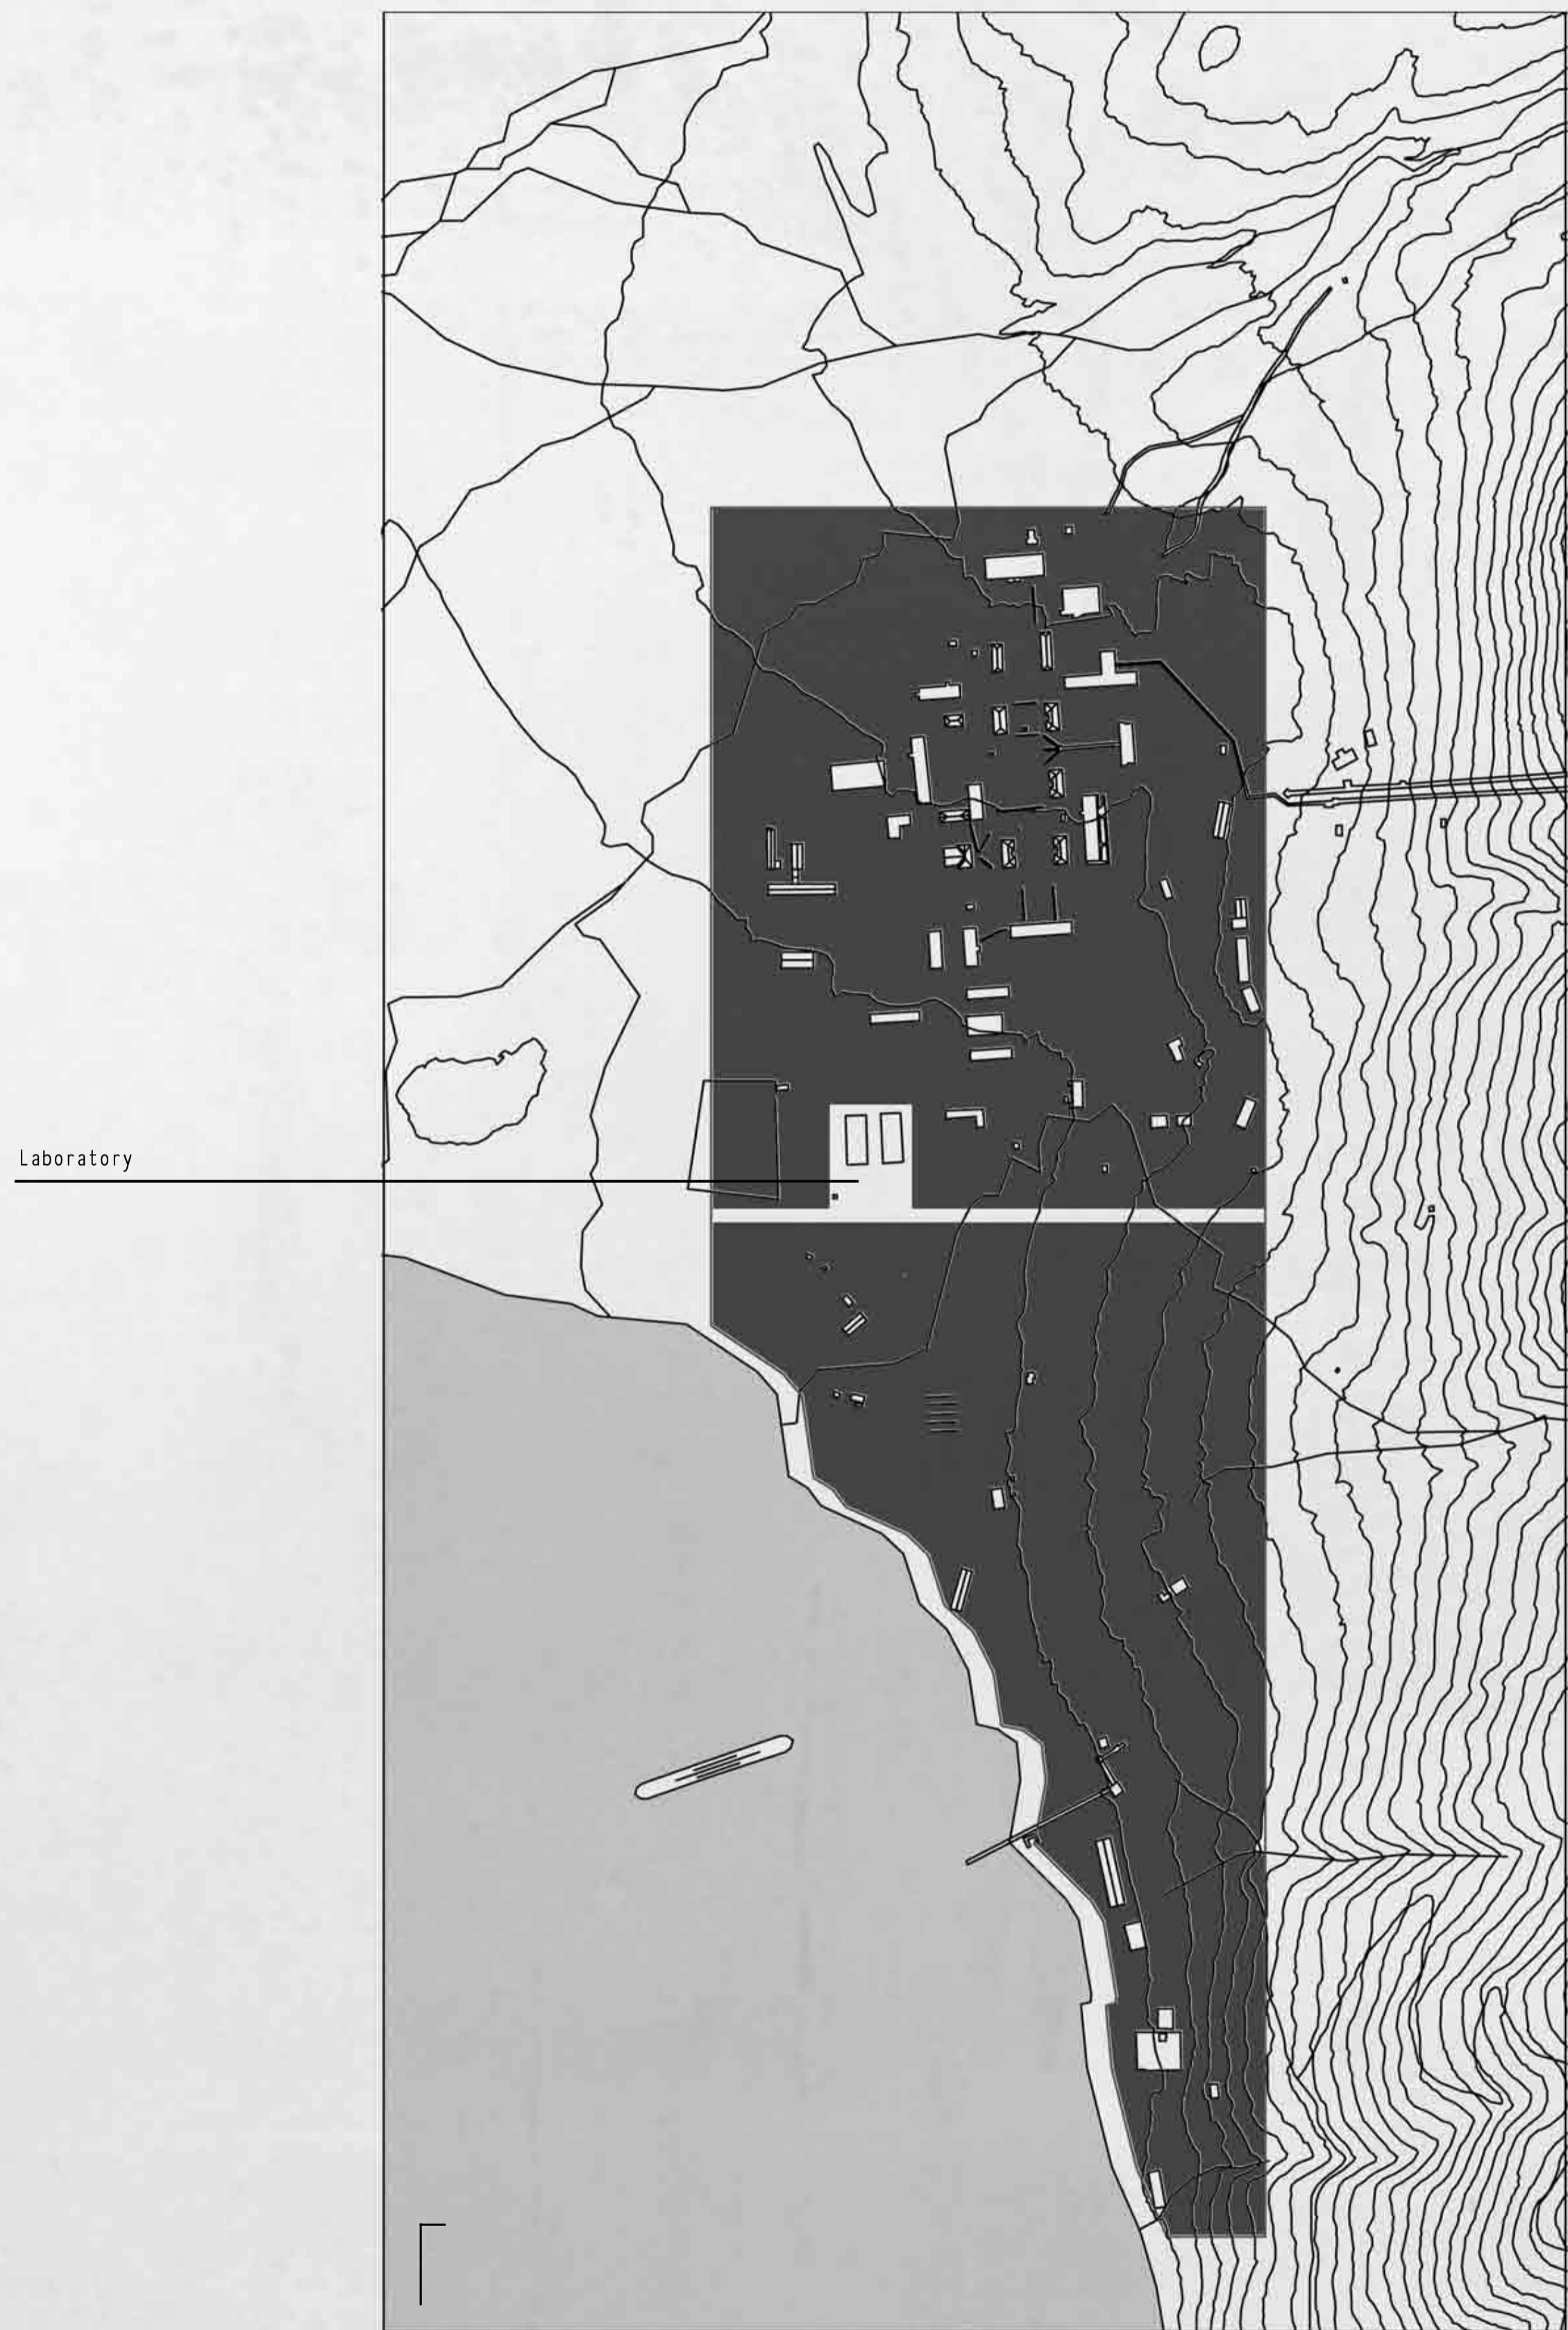

PYRAMIDEN, Billefjorden, Spitsbergen Island, Svalbard, Norway.
