

DIG YOUR SPACE!

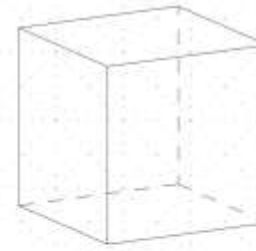

TEAM 1363

-multiple possibilities-

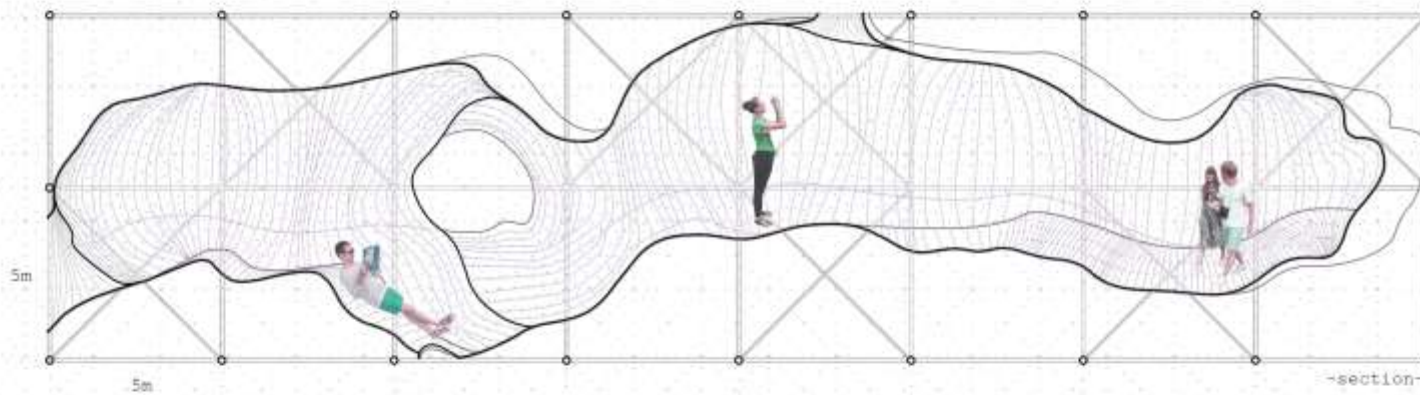

-metal frame-  
5x5x5

-moldable material-  
inside

The first homes emerged as shelters. They were a way to feel safe from the weather, animals and even other humans. These shelters were a space, very primary, where it did not matter if it had different rooms. What mattered there was the existence of the space around us.

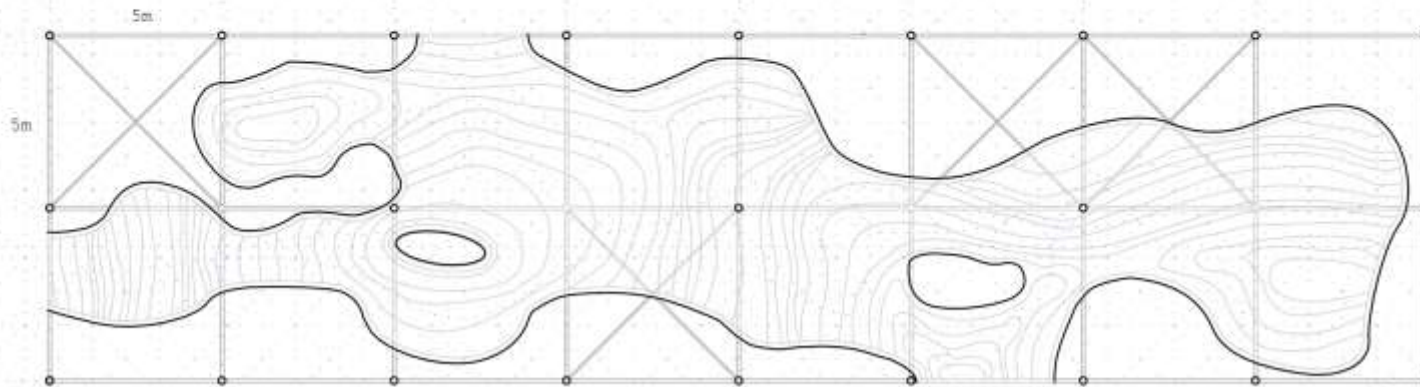

-Possible excavation-

-section-

Nowadays, we are so attentive to solve the demands of a program that we are forgetting the importance of the space itself. In addition, architecture is increasingly more related to the outer space in which it is located and leaving aside the relationship with the individual who inhabits it.

It is here proposed, therefore, the maximum expression of an architecture related with the person who lives in it. The project is based on modules formed by an exterior metal frame and a moldable, but resistant, material inside.

-plan-

YOU CAN  
DIG YOUR  
OWN SPACE!
