

FORMICARY : A HOUSE

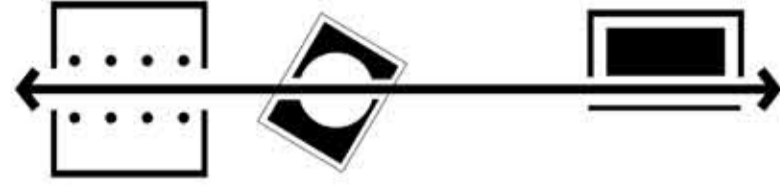

PASS BY SPACE :

1. The integrity of each space is maintained.
2. the configuration of the path is flexible

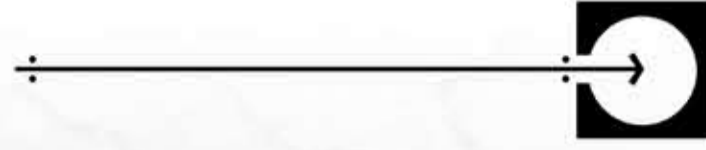

PASS THROUGH SPACES :

The path pass through a space axially, obliquely or along its edge.

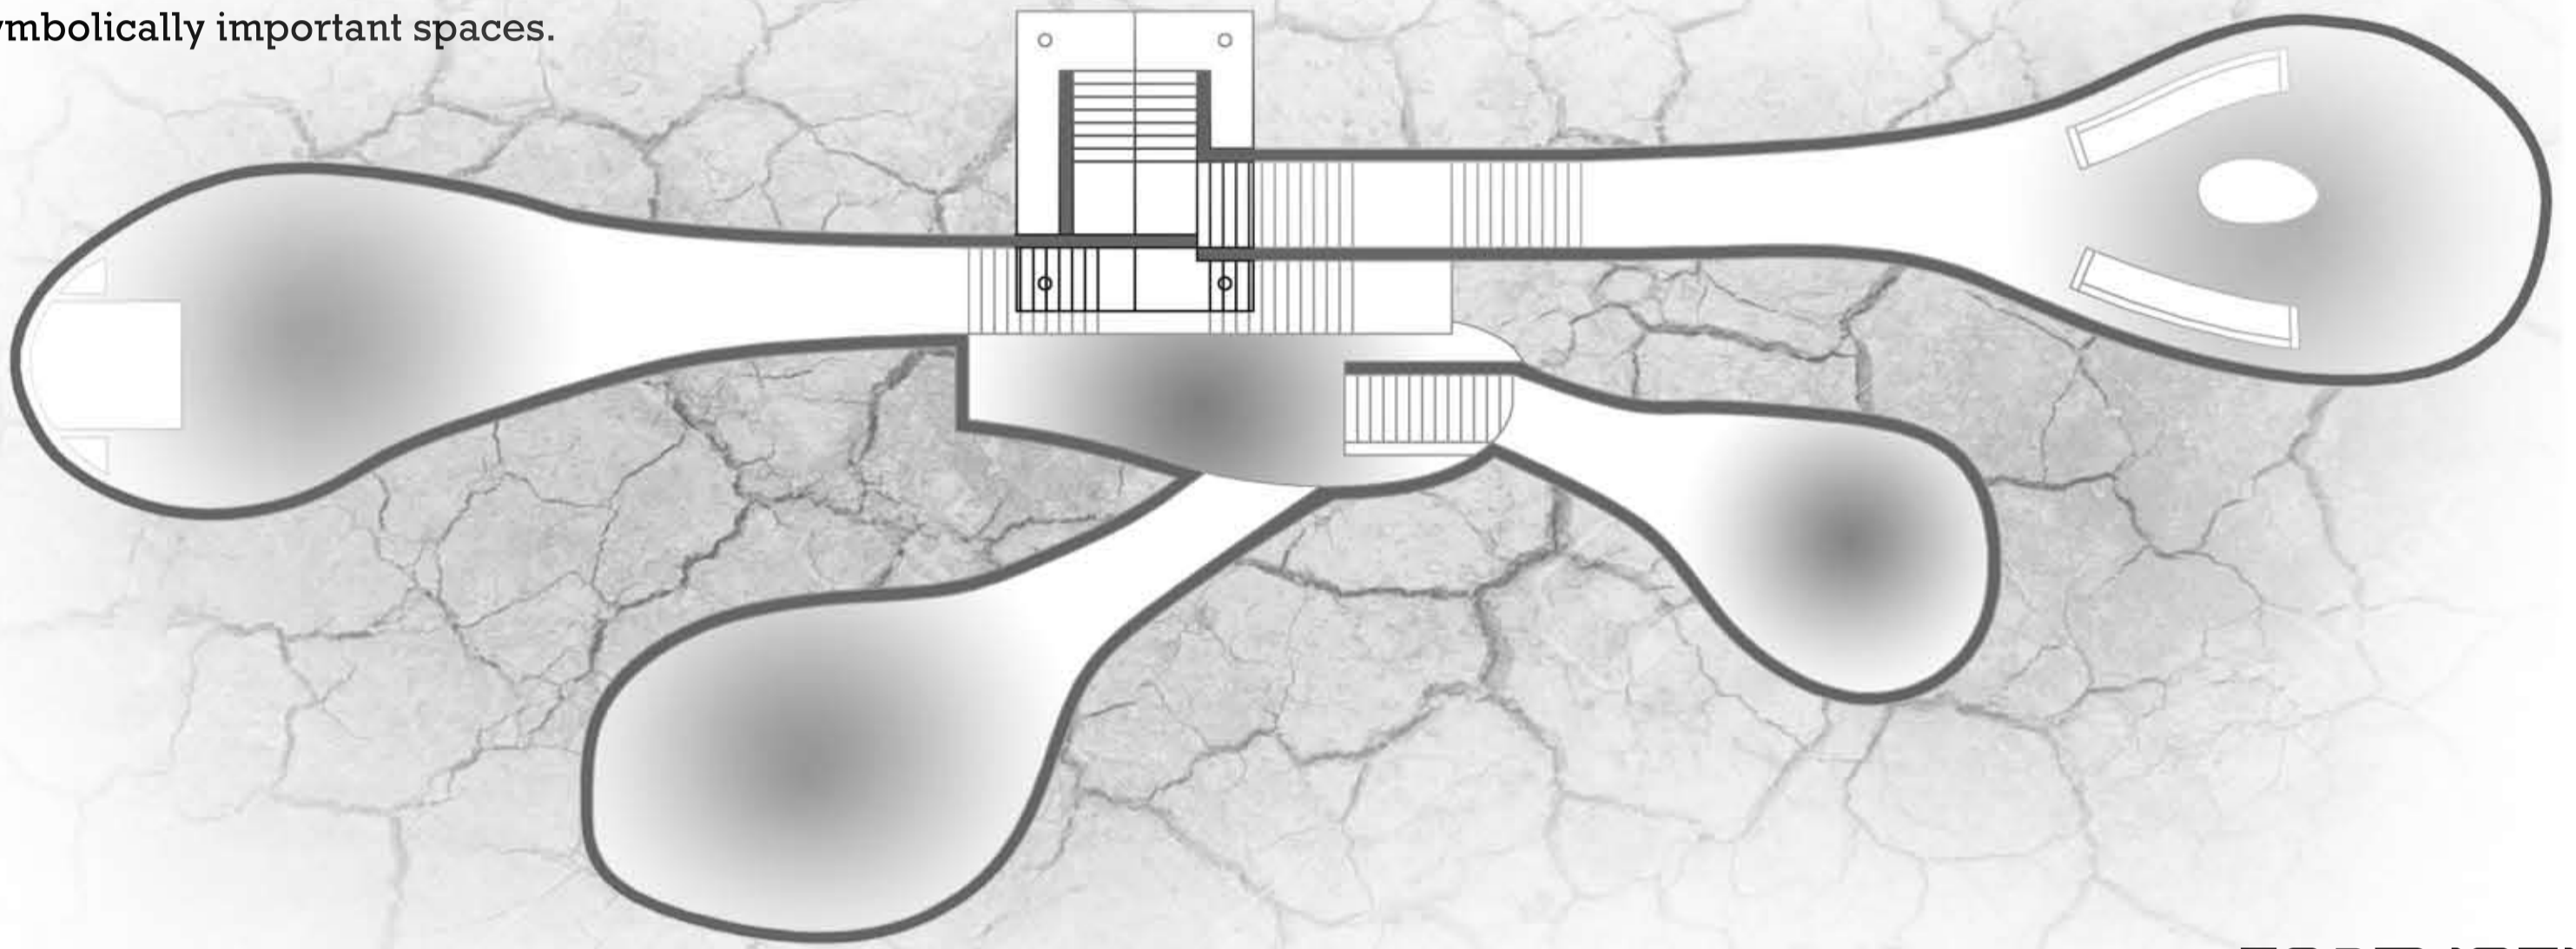

TERMINATE IN A SPACE :

1. The location of the space establishes the path.
2. This path -space relationship is used to approach and enter functionally or symbolically important spaces.

"Whether it be the sweeping eagle in his flight, or the open apple-blossom, the toiling work-horse, the blithe swan, the branching oak, the winding stream at its base, the drifting clouds, over all the coursing sun, form ever follows function, and this is the law."

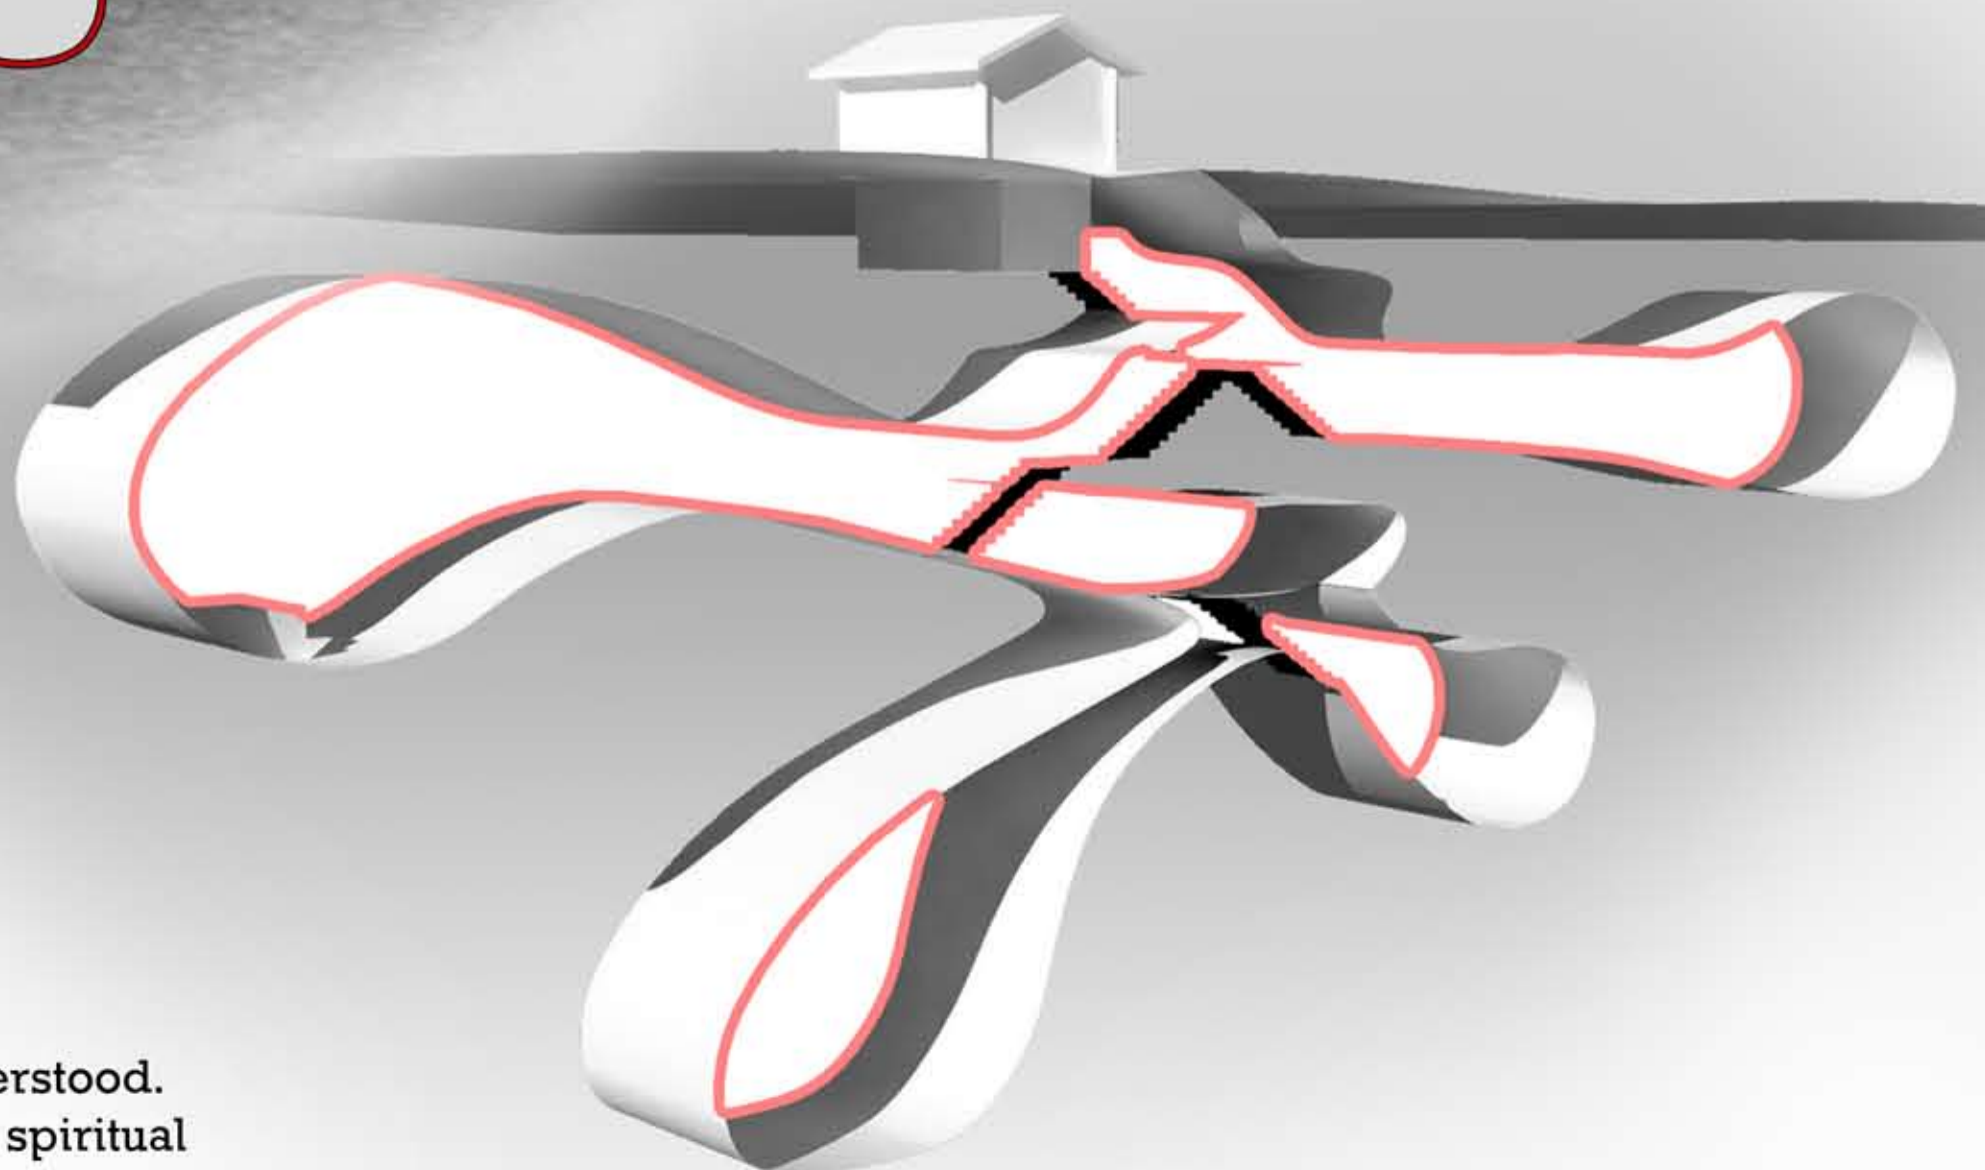

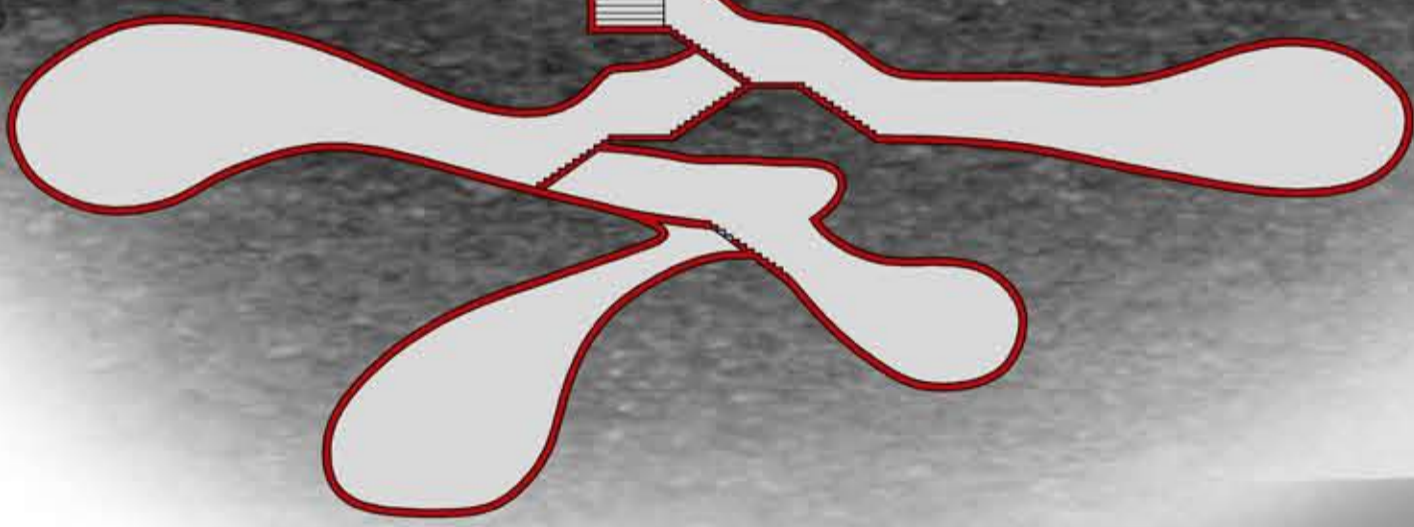

But we have tried to revert the normal sequence of the design process.

Team 1851

YES!! ,Architecture can be imagined without site . Usually , the site given to us is a piece of land and construction is done on it . But , we have tried to construct the whole house underground. only a staircase leading into the house would be visible from the top. So this house is site independent and can be made anywhere .

·Form follows function-that has been misunderstood. Form and function should be one, joined in a spiritual union.·

Team 1851
