

Learning from dimension

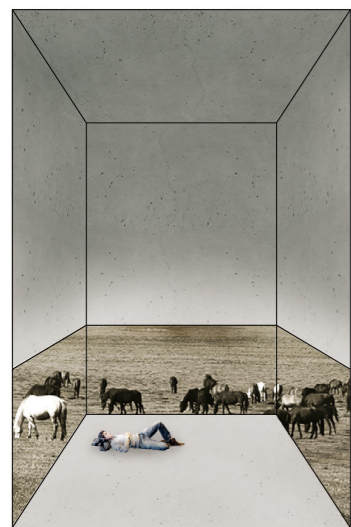

Room II

Room 5

Room I

-Definition

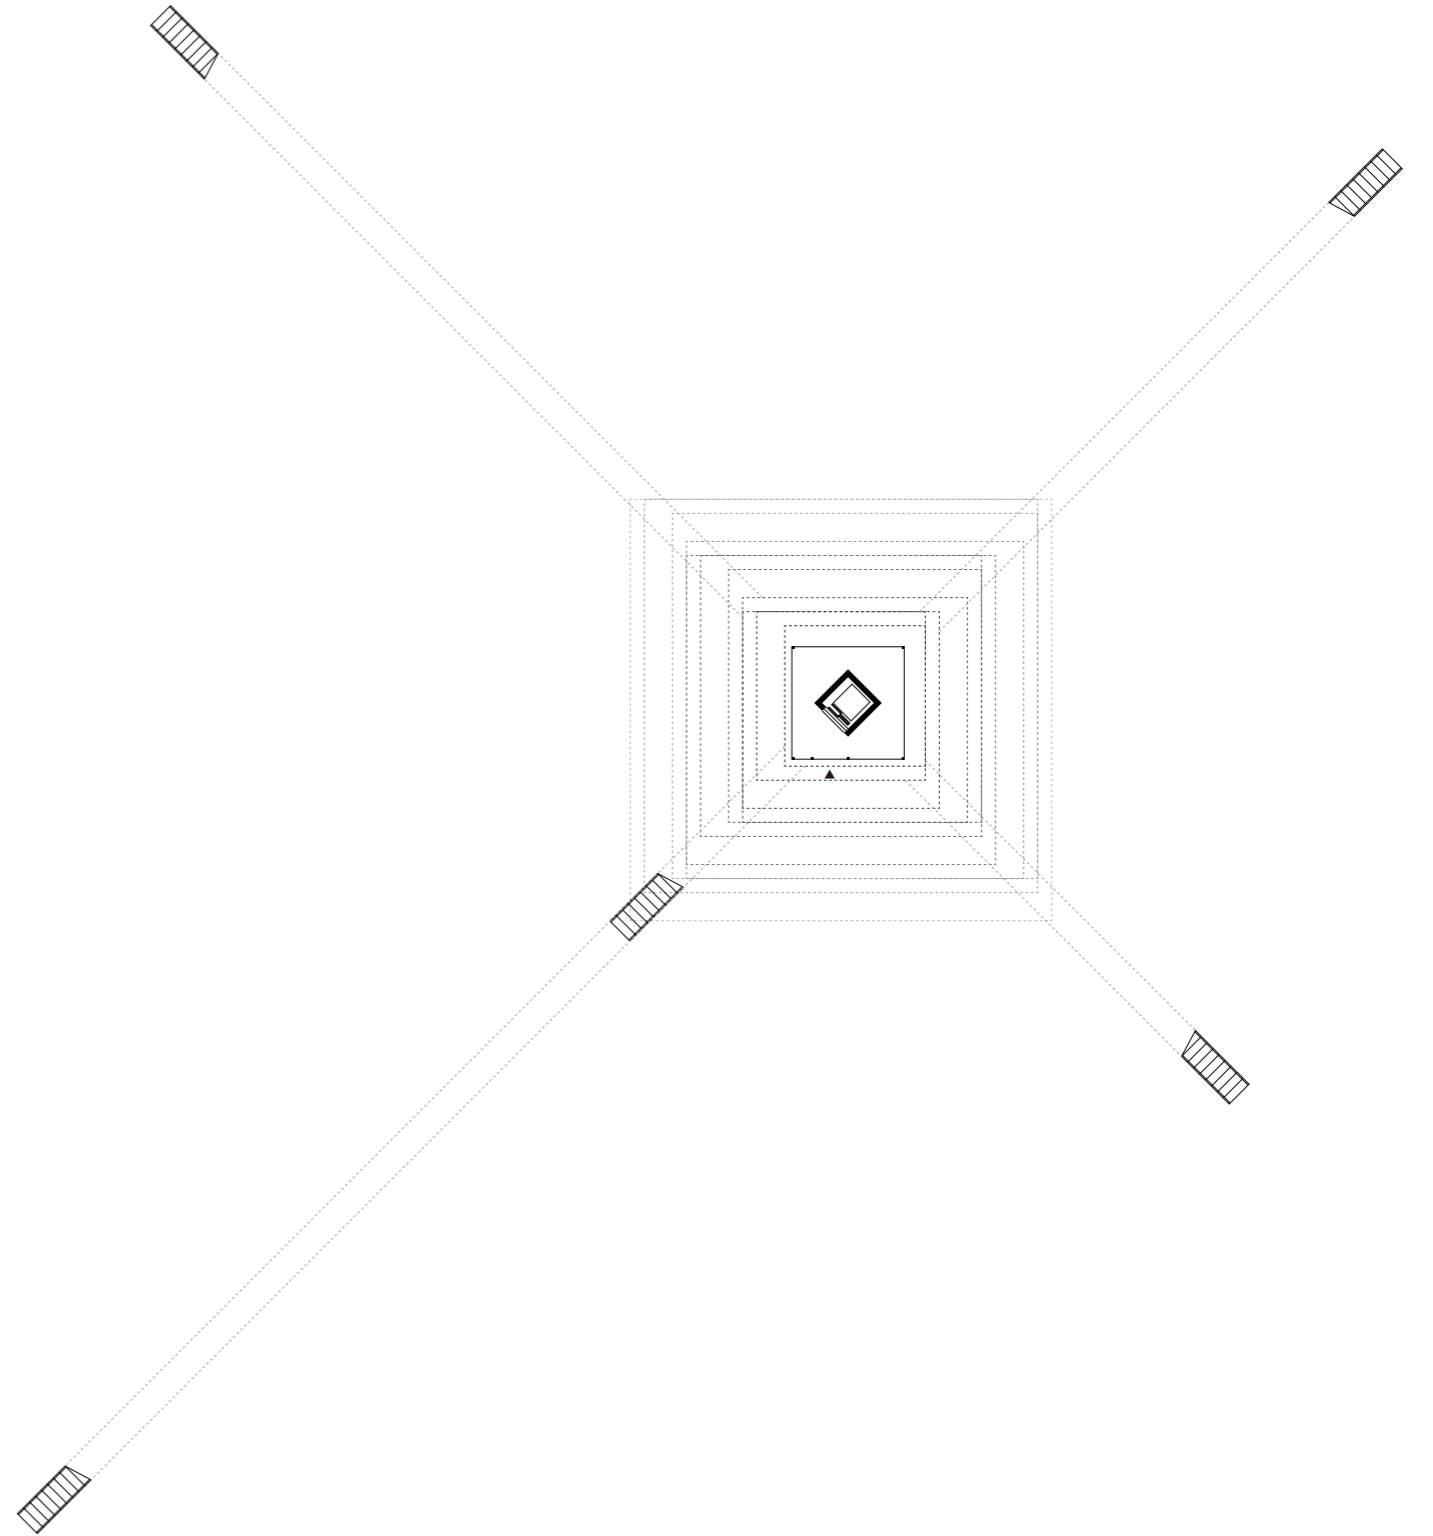

'Space' and 'Function' are believed as inseparable elements with architecture. But if we strip them carefully, 'bare core of architecture' appears. That is 'Dimension'. The pure architecture is defined by dimension such as width, depth and height.

-Attitude

In this housing, different shaped rooms are stacking, and people can choose their best room by scale. Because everybody has different preference of scale which defines their comfortableness. In addition, I just design interior space as simple as possible. I would like to leave interior finishing for client's taste.

-Structure

Staircases work as tension wires which are supporting this building from 4 sides. These wires are located shortest side of each slab and make balance of moment. Besides, elevator is located in the middle as main column.
