

## House of Hope

Architectural practices now a days has become more prominent in hypothetical world. We don't use it only for living but to discover the sense and absence of human interaction in architecture. Architecture is not only a subject for making a better life or a better living, it directs our life and mind toward a world of imagination. It controls our passion in thinking, it controls our absent mind. The project 'House of Hope' has come from this idea, where architecture will lead us subconsciously toward a very much known phenomena of our lifestyle:

PEOPLE ARE THE REASON OF THEIR OWN LIFE AND THEY CAN DERIVE THEIR LIFE TOWARD WHATEVER THEY WANT.  
It is a hypothetical subject that was brought forward for the hopeless generation and to give them a message...

*'You can derive the sunlight to any direction you want, why don't you derive yourself toward light'*
