

Of the space, By the function, For the Extension

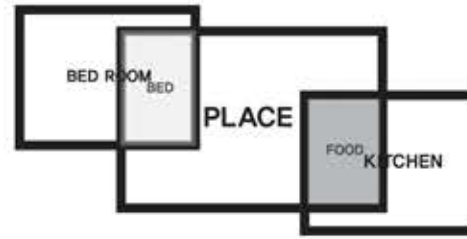

Of the space, By the function, For the Extension

To do this is to enable them to make their way in their own ways. When they built a house, they lay stones on the stones and lay their walls on top of the stones. And such groups are getting closer and closer to form a village because of their solidarity. In the space they cover all the functions. We wanted to use these principles to build their own spaces through their own spaces by putting them on the site.

Finally, we can only afford to provide them with minimal implementation, technical help, and ultimately their use is theirs. In the future, if there is a need for space, We hope to they creating their own space in their way, by maintaining their uniqueness.

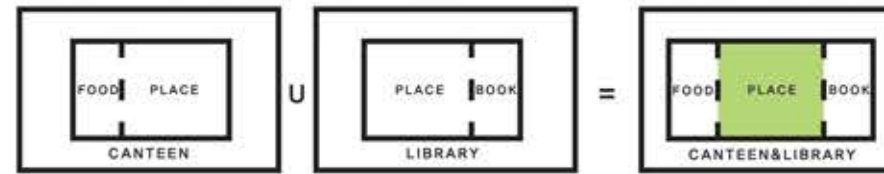

PLACE >> SPACE

The defining characteristic of a space is that of a function.

PROGRAM

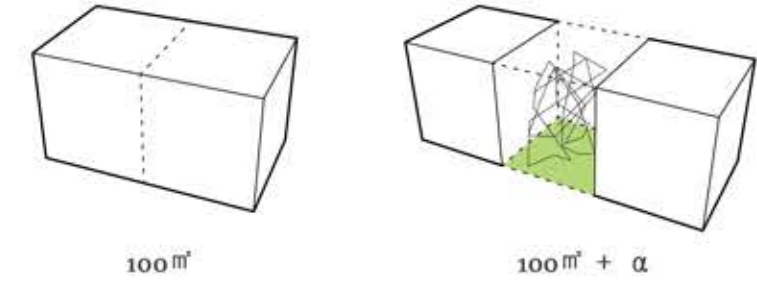

_Library + Canteen

We used to the way of defining their space that the function defines characteristic of space. Our intention is to broaden the scope of the sphere they are able to work on, to be The place where they open their books and eat their meals is 'space'. We thought that the most expressive aspect was the way they created space.

FUNCTION

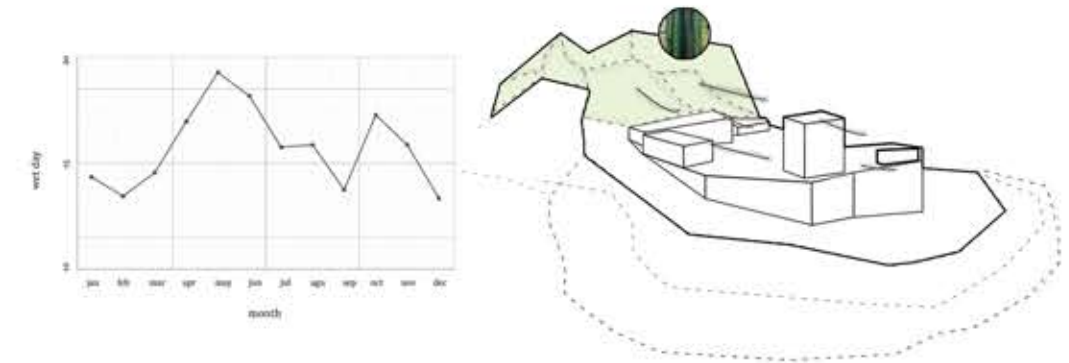

_Limited personnel and area

By dividing the mass, the function is extended to middle space, to increase the number of children. And we thought it would show their way through the use of middle spaces.

CLIMATE

_Rain, Humidity, Landscape, Materials, etc.

Our materials mainly use bamboo near. Our role was to fulfil the functions and the space was defined as the characteristic of the room, depending on the size of the children, and where they were eating and reading the book. We thought that they could define their place, not ours.
