

S:POT

This proposal is fusion of traditions and modernity. The architecture of the design is inspired by local forms of houses, where houses have a simple form. To make building as cheap, as possible, but not at the expense of architectural aesthetics, we decided to use wooden structure. Where in some points, the wall is filled by concrete blocks. The main story is happening inside, where small platforms were installed. These platforms provide playful environment for students. Another goal of the building is good interaction with the environment, thanks to the amount of the windows used in design.
