

DEMILUNE

ARCHITECTURE BRINGS
SPECTACLE AND
SUSTAINABILITY TOGETHER
WITH ICONIC SIMPLICITY AND
LIMITLESS POTENTIAL

The library and the canteen is
located adjacent and within
the existing school building
layout.

The architectural intention of
the project is to provide
elements that link to the
neighbourhood- its scale and
characteristics and visually ties
the existing and new work.

It aims to create a rhythmical
exchange between learning
and free time.

DEMILUNE

Just as the child grows the building appears to grow out of the ground.

The massive stone offers a contemporary material and depth to the concrete which usually can seem too smooth and cold. A real dialogue is born between the two materials.

The connecting covered and external open spaces have been enhanced to create usable environment for the students and teachers.

The concept of tightness is replaced by a permeable approach where the proposed elements communicate actively with each other.
