

BUYI SNAKE

The aim of the project is to create not just a canteen and a library for the Buyi kids but to generate a space where they can play and enjoy while learning. We develop a shelf unit with multiple possibilities using a modulation of 40 cm, so they can sit, stand, crawl and climb to find their favorite place for reading, or just to have fun. The shelf takes its colors from the traditional Buyi rice.

The canteen is distributed in order to have 2 shifts of 100 people having lunch at the same time.

The whole building is constructed looking for the least cost and the better adaptance to the climate

Buyi rice colors indicate the books category (terror, history, adventures, love...)
