

eating together is a collective act of  
 sustaining our life together  
 rather than creating a building we  
 proposed a solution that would create  
 and stimulate the interaction  
 between the members of the school  
 letting them see the site area so  
 they find appropriate  
 the solution has a main component  
 a core made out of local material  
 stone containing the cooking area  
 and the furniture and the benches  
 for the centre and the reading  
 room

The core also contains the area  
 necessary for depositing the  
 worm-tent structures that can  
 be assembled in case of bad  
 weather conditions  
 To install the tent the pupils  
 will organize and collaborate,  
 thus learning to respect and  
 support their designs
